A Cat's Whiskers

猫的胡须

Sharon Street (美) 著

Look at this cat.
A cat is built to take care of itself.

A cat feels things with its whiskers.
A cat's whiskers help the cat know if it
can fit through small spaces.

Did you know that whiskers help a cat
feel its way in the dark?

A cat hears with its two ears.
A cat's ears can turn different ways
at the same time.

Did you know that a cat can turn just one
ear towards a sound?
This helps the cat hear without turning
its head.

A cat smells with its nose.
A cat's nose helps it recognize
people and places.

Did you know that a cat's sense of smell
is better than its eyesight?
Its sense of smell helps the cat
find safe places.

A cat sees with its two eyes.
A cat can see well when it is almost dark.

Did you know that a cat's eyes
can see very small movements?
This helps the cat when it is hunting.

A cat walks on its four paws.
A cat's paws have soft pads on the bottom.

Did you know that the pads on a cat's feet
help the cat to move quietly?
This helps the cat sneak up on prey.

A cat has a long, thin tail.
A cat's tail helps the cat keep its balance.

Did you know
that if a cat falls,
it moves its tail
and twists its body?
This helps the cat
to land on its feet.

What is this cat doing to take care
of itself?

.....Think and Discuss.....

What helps a cat move quietly?
