冰激凌不只是冰冻奶油。它是由牛奶、奶油、无脂肪乳固体以及糖和其他配料制成的。这些配料经混合，用巴氏法灭菌并经过均质化处理。然后这种混合物经空气搅打和冷冻后冷却，以防止形成大的冰块晶体。这样的程序赋予冰激凌松软、清新的口味。

We like to eat ice cream.  
Ice cream is sweet, smooth, and cold.  
Do you know how ice cream is made?

# collecting Milk

The main ingredient in ice cream is milk.

Milk comes from cows. Milking machines collect the milk from the cows. The machines pump the milk into a tank. The tank keeps the milk cool until it can be collected from the farm.

A large truck collects the milk from the farm.  
This refrigerated truck is called a tanker.  
The tanker keeps the milk cool on the way  
to the factory.

# Making Ice Cream

At the factory, milk is mixed with sugar to make an ice cream mixture.

The mixture is quickly heated and cooled to kill any germs that are in the milk.

Then the mixture is stirred to get rid of lumps.

Flavors and colors are added.  
Fruits, nuts, and candy can be added, too.

The ice cream is then put into tubs.  
The tubs of ice cream are put into a freezer  
to harden.

# Selling Ice Cream

A refrigerated truck picks up the ice cream tubs from the factory. The truck takes the ice cream to the store. The tubs go into a freezer in the store.

GEOGRAPHIC

You can choose from all the different flavors of ice cream in the freezer.

What's your favorite ice cream flavor?
